## ■ KLM Flame Aviation Fire Trainer

TO WHOM IT MAY CONCERN

Dear Robin,

In July 2017 Flame Aviation installed a brand new V9000 Commander™ Next-Generation fire trainer next to our flight and cabin crew training center. The installation was efficient and completed in only one day.

At the same time, KLM started to build a new training center. KLM wanted a fire trainer inside of the training center. That inhouse fire trainer is installed by Flame Aviation in May 2019.

To overcome the period between the start of the new training center and the installation of the inhouse fire trainer, Flame Aviation made available to KLM a brand new V9000 Commander™ Next-Generation fire trainer.

Over the last one and half year, the fire trainer was in use almost daily and has performed outstanding. Also the gas consumption was very minimal. Only 13kg per three/four months.

Because of the excellent building quality and the high quality equipment and components used, we expect the life time of the fire trainer easily ten to fifteen years.

The fire trainer is still in operation until May and can be visited every day. We are also available for further questions.

Best Regards

Richard van den Nouweland  
Project manager
